## Features:

- Maintenance-free
- Can deal with high dynamic stress
- Little pretensioning required
  - Suitable for back-tension pulleys
  - Smooth engagement of belt with pulley
  - Less noise at high speed operation

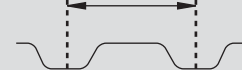

## TIMING BELT

MR Pitch = 9.525 mm.

ZA Pitch = 9.525 mm.

MY Pitch = 8.00 mm.

ZAS Pitch = 9.525 mm.

RU Pitch = 9.525 mm.

ZB Pitch = 9.525 mm.

S8M Pitch = 8.00 mm.

ZBS Pitch = 9.525 mm.

YUCT Pitch = 8.00 mm.

STD Pitch = 8.00 mm.

# TIMING BELT INSTALLATION GUIDE

## To Replace Timing Belts

There are no general procedures that apply to every job. To provide an idea of what steps would be taken in a job of this type, here's the step-by-step procedure recommended by one manufacturer. Remember this is just an example. It's important that you check your particular vehicle manufacturer's maintenance manual for specific instructions.

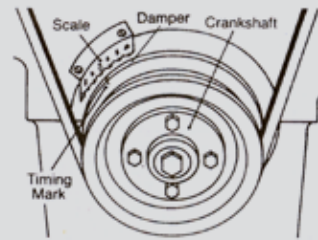

## General Information

Timing Belts first appeared on domestic cars in the mid 1960's. They replaced chain drive and gear systems because they are quieter, less expensive and need no lubrication. Timing belts should be checked frequently for signs of wear or damage and re-tensioned when necessary.

Always follow the vehicle manufacturer's recommendation for replacement of timing belts. These vary from one manufacturer to another. Tensioning methods also vary among manufacturers. Some car makers have designed special tools for installing timing belts. Use of any other tool could result in damage to the belts. Use of any other tool could result in damage to the belt, pulleys and possibly the engine.

## Belt Removal

**Step 1:** Turn the crankshaft (in the direction of normal rotation) to TDC by aligning the "O" timing mark on the engine cover scale with the timing mark on the crankshaft damper. The distributor rotor should be lined up with the index mark on the distributor body to be in the No.1 cylinder firing position.

**Step 2:** Remove any belts, pulleys or hoses interfering with removal of timing belt cover.

**Step 3:** Remove belt cover

**Step 4:** Loosen belt tensioner adjustment bolt.

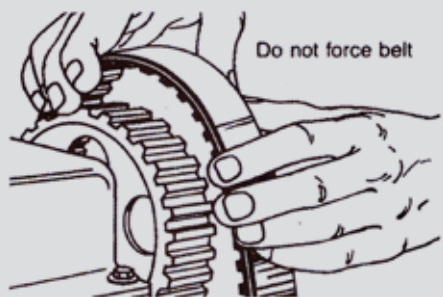

**Step 5:** Pry tensioner away from the belt and re-tighten the tensioner adjustment bolt.

# TIMING BELT INSTALLATION GUIDE

## Belts Installation

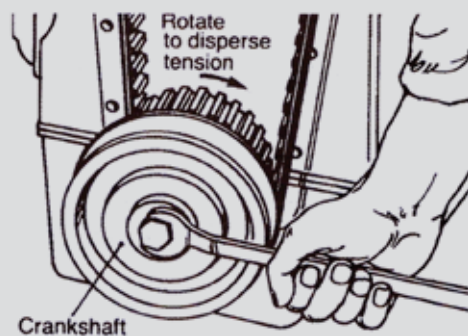

Step 1 : Make sure timing marks are properly aligned

- a. Crankshaft pointer at TDC.
- b. Distributor rotor aligned with timing mark on distributor housing.
- c. Cam pulley timing pointer aligned with mark on engine block.

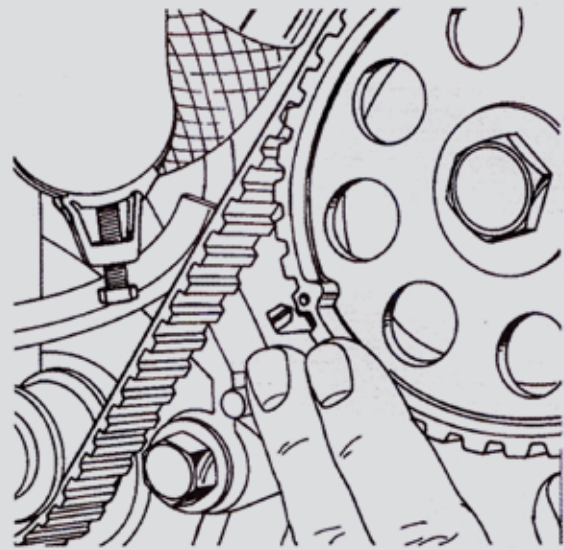

Step 2 : Place belt over pulleys

Step 3 : Loosen the tensioner adjustment bolt so that it can swing back against the belt. Carefully to ease the tensioner into position. Do not let it strike the belt. Make sure tensioner spring is engaged properly.

Step 4 : Rotate the crankshaft (in the direction of normal rotation) at least two complete turns to remove any slack in the belt and allow tensioner to tighten against the belt.

Step 5 : Re-check timing marks. Tighten the tensioner adjustment and pivot bolts to the manufacturer's recommended torque (ft-lbs.) setting.

Step 6 : Replace the timing belt cover and any belts, pulleys or hoses that may have been removed.

Tighten all bolts to the manufacturer's recommended torque (ft-lbs.) setting.

Step 7 : Start the engine, check the ignition timing and make any necessary adjustments.

These steps can differ significantly for the same job on another model. Be sure to check manufacturer's maintenance manual for proper procedure.

## NOTE

When a belt fails prematurely, it's important to determine why it failed so corrective action can be taken. If the belt has to be removed for any reason, a new belt must be installed.

**NEVER** refit a used belt.

(See next page for details.)

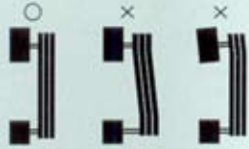

# TIMING BELT TROUBLESHOOTING GUIDE

Symptoms	Probable cause	Corrective action
<p>Tensile failure</p> 	<ul style="list-style-type: none"> <li>■ Foreign body in drive</li> <li>■ Excessive installation tension</li> <li>■ Belt crimped due to improper handling</li> </ul>	<ul style="list-style-type: none"> <li>▶ Ensure cover is correctly fitted</li> <li>▶ Install at correct tension</li> <li>▶ Observe handling instructions</li> </ul>

# MAINTENANCE

## General Instructions

①

Check the pulley for alignment. Incorrect alignment may result in the short belt life.

①

Check the metals and bearings of pulleys for periodic oiling.

①

Check the pulley grooves to be sure they are all equal in dimensions.

①

Check the pulley for wear and remove any rust, dirt or grease causing the belt wear.

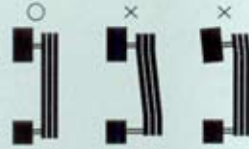

①

Airtight cover may shorten the belt life because it prevents heat radiation. Keep proper ventilation.

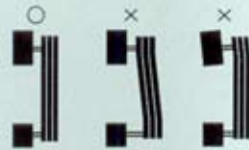

## INSTALLATION

①

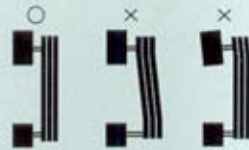

Locate the belt by moving the motor.

①

Do not use a lever to force the belt onto the pulleys.

①

Locate the belt first on the drive pulley.

①

After a few days running the belt, readjust take-up if necessary.

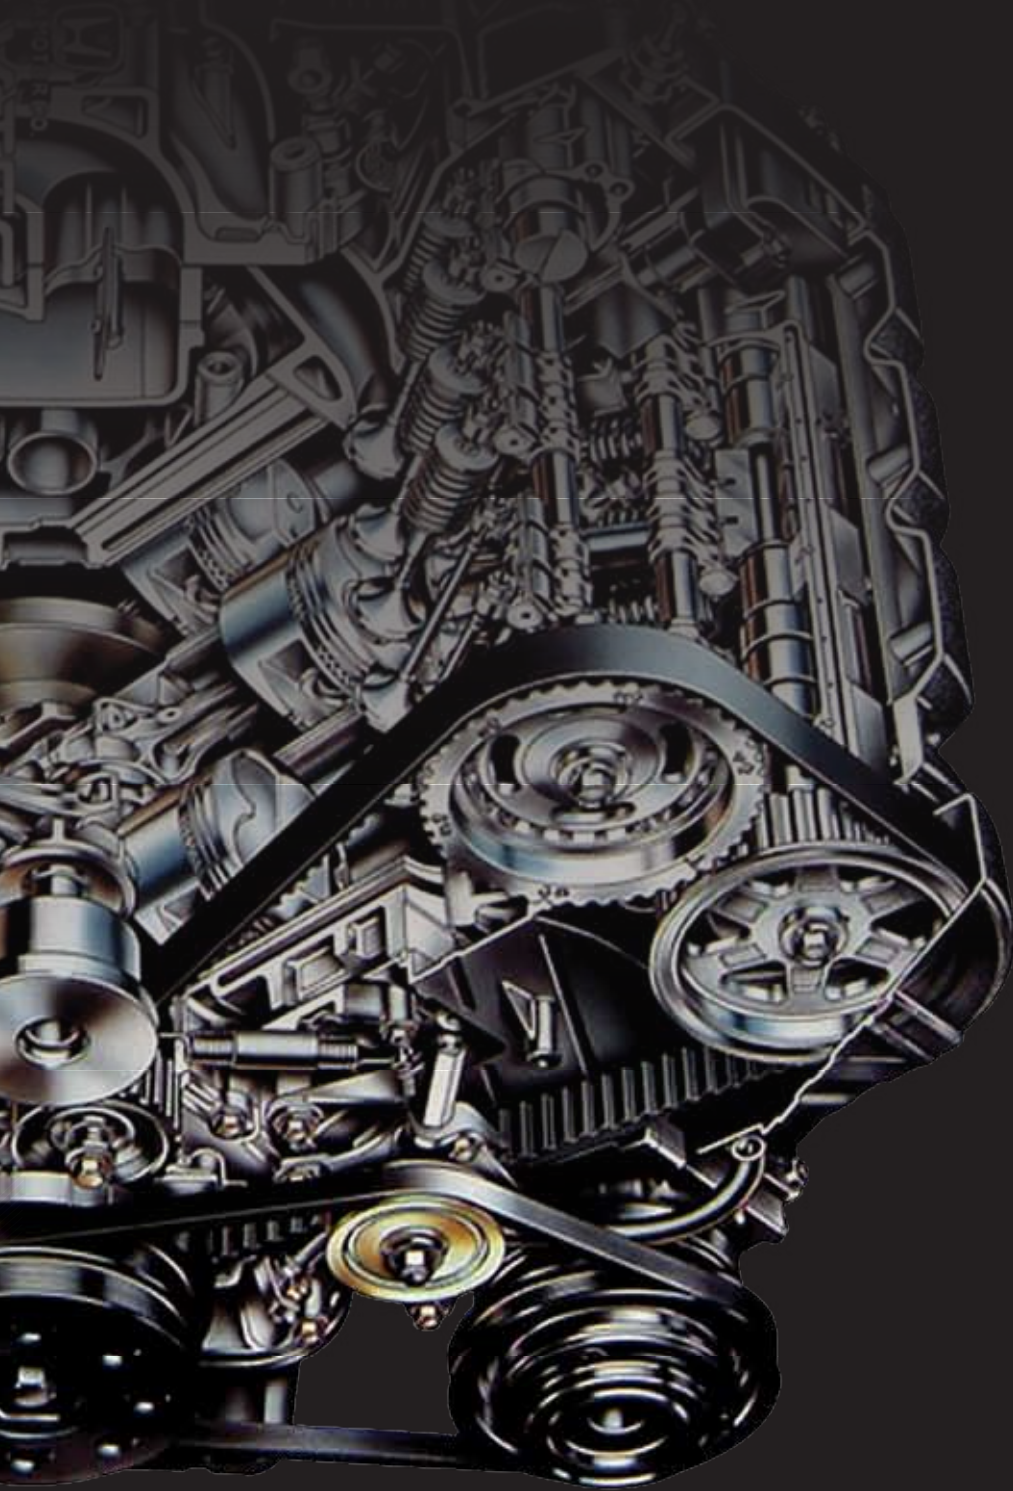

①

Avoid the combined use of new and used belts in a set that may shorten the belt life due to the unbalanced stretch of belts.

## STORAGE

Storage in shelves or hang on racks where dark and cool
